

SpringFerm BR-2

INGREDIENTS

Inactivated yeast (rich in growth factors), Zinc sulphate, Manganese sulphate.

DESCRIPTION

Fermentis SpringFerm BR-2 is a balanced complex yeast nutrient based on the synergies of organic, mineral and vitamin's growth factors. Its formula was specifically studied to optimize its effects on yeast growth & yeast survival. It reduces the risk of sluggish or stuck fermentation typically in wort containing adjuncts.

PROPERTIES

Fermentis SpringFerm BR-2 is a health package for your yeast. Thanks to its assimilable nitrogen, it decreases organoleptic deviation risks (volatile acidity, H₂S). It increases the vitality of the yeast therefore it can enhance the final attenuation and reduce the diacetyl content in the final beer.

DOSAGE

1 g/hl to 5 g/hl depending on wort composition.

INSTRUCTIONS OF USE

SpringFerm BR-2 should be mixed in wort/water and added directly to the fermentation tank. It is not recommended to mix the SpringFerm BR-2 with dry yeast during the rehydration step.

MINERAL CONTENT

% dry weight:	> 90,0
Zn	1,90 – 2,10 % w/w
Mn	0,24 – 0,30 % w/w

MICROBIAL ANALYSIS

Total bacteria*:	< 1 / ml
Acetic acid bacteria*:	< 1 / ml
Lactobacillus*:	< 1 / ml
Pediococcus*:	< 1 / ml
Wild yeast non Saccharomyces*:	< 1 / ml
Pathogenic micro-organisms:	in accordance with regulation

*when used at 1g/hl

IMPORTANT NOTICE

Please note that any change to a fermentation process may alter the final product quality. We therefore advise that fermentation trials are carried out prior to using our product commercially.

STORAGE

During transport: the product can be transported and stored at room temperature for periods of time not exceeding 3 months without affecting its performance.

At final destination: Store in cool (< 10°C/50°F) and dry conditions.

SHELF LIFE

36 months from production date. Refer to Best Before End date printed on the sachet.
