

To whom it may concern

'Sustainability' statement

Sustainability is close to our hearts!

A small summary:

- Raw materials are mainly purchased in tankers with short-distance purchasing (up to 200 km);
- The reuse of plastic trays for paste products (approx. 10,000 T of finished product per year);
- The reuse of IBCs for syrups (approx. 15,000 T on annual basis);
- About 50% of the tonnage is (mostly) exported with (FTL) tankers;
- The cooling water is reused;
- Insulation has been installed to reduce heat losses and heat recovery is present where possible;
- The lighting is at least 95% LED;
- The roofs are covered with solar panels;
- A completely green energy contract is present at the new production site;
- Waste is separated and collected for recycling whenever possible (paper & cardboard, PMD, glass, plastics, packaging, oil, etc.)
- All waste water is used as carbon water source for treatment of sewage, manure processors and other contractors;
- An energy audit is carried out and an action plan will be set up. More clarity on emission will follow.

We have contacted an external consultancy regarding sustainability and possible improvements.

This statement supersedes previously issued statements and is valid until the issuance of a new statement.

Yours sincerely,

The Management team.
